

## NowSpeak Mobile ASR for BlueCore

Speech recognition designed  
for Bluetooth devices

### Features

- Speaker independent technology, no user training required
- Hands-free call answering
- Make calls and control device by voice
- Optimised for headsets and car kits in real world conditions
- Works in-car at motorway speeds with high accuracy
- Fast and responsive, recognition performed in real-time
- Small footprint allows multiple languages on a device
- Reference design with ASR and TTS integrated available

NowSpeak Mobile ASR for BlueCore brings voice control to your Bluetooth device. Users can answer a call, make a call and query device status just by speaking.

Combined with NowSpeak TTS it is now possible to have a truly hands-free voice interface for Bluetooth devices. When a call comes in the device speaks the caller's name and the user can respond, without pressing a button, by saying "answer" or "ignore".

Users can also make a call by saying "call home", "call office" or "redial last number" and control the device with commands such as "check battery", "voice dial" or "am I connected".

NowSpeak has optimised its speech recognition technology to work effectively in real world conditions, such as during motorway driving. Built-in noise filtering significantly reduces the effect of car noise and background babble. False start detection means that hesitation at the beginning of phrases can be ignored.
